[Sophos Antivirus Slow Boot Up](#)

This is because, as long as there is no USB drive attached, nor CD disc in the drive - that are set to be bootable and most are not set like this - the computer will quickly skip over the first two options and boot from the hard drive as normal.

Using the one-time change boot menu is the quicker and safer option, but there is another way to alter the boot order.. SBAV should not be used as a first response cleanup tool unless advised by Support.. However the malware is not removed so unless you have been asked to collect samples move to the 'Sophos Advanced Scans' option.. You can then use this tool to boot a computer into a minimal Linux-based operating system and run a scan of the computer.

exe) file To use it you must download the program to a Windows computer, install it, and then run one command.

Commonly the F12 key and Esc key are used You will not have very long to read the screen and the key press has to occur within a few seconds otherwise the computer will boot normally and this will most likely be the hard drive.

A few caveats about SBAV: it cannot be used on computers with RAID configurations.. Operating systems Windows What is SBAV? The Sophos Bootable Anti-Virus (SBAV) tool allows you to scan and cleanup a computer infected with malware without the need to load the infected operating system installed onto the local hard drive of a computer.. How do you run the tool? When the tool has fully loaded you will see the 'Main Menu'.. Sophos has released a free on-demand Virus Removal Tool The program previously was available to the company's larger customers to help them clean up antivirus..) The boot menu, once displayed will look similar to this: The exact key you have to press can be different on different computers.
