FAQ

---

It has a name and optionally, aliases: Encoding::ISO\_8859\_1 What is a character encoding, and why should I care? All encodings and their labels are also available as non-normative encodings.. Problems with Other Encodings Name #=> 'ISO-8859-1' Encoding::ISO\_8859\_1 Names #=> ['ISO-8859-1', 'ISO8859-1'] Ruby methods dealing with encodings return or accept instances as arguments (when a method accepts an instance as an argument, it can be passed an name or alias instead).. 'some string' Encoding #=> # string = 'some string' Encode( Encoding::ISO\_8859\_1) #=> 'some string' string.

3. [encodings cp1252.py](#)

Encoding #=> # 'some string' Encode 'ISO-8859-1' #=> 'some string' Encoding::ASCII\_8BIT is a special encoding that is usually used for a byte string, not a character string.. What is character encoding? And which form of encoding should you use? Displaying humble text online has its challenges.. json resource Output encodings To get an output encoding from an encoding encoding, run these steps.. An instance represents a character encoding usable in Ruby It is defined as a constant under the namespace.
